

# Hedgehogs

- Hedgehogs eat insects, small mice, snails, lizards and even snakes because they can kill them with their spikes.
- There are more than 15 different types of hedgehogs.
- When baby hedgehogs are 3 months old, they leave and build a nest by their self.
- When they are born, they don't have any fur.

- They have sharp spikes on their back so they can kill animals to eat them and to protect themselves.

### DID YOU KNOW...?

Hedgehogs also have a very small tail.

### DID YOU KNOW...?

They are all
